

**This guide contains all the information you need to report productive units for the 2013 participation year.**

Guide for Reporting Productive Units ..... p. 3

List of Productive Units ..... p. 10

# AgriStability

**GUIDE FOR REPORTING  
PRODUCTIVE UNITS FOR  
2013**

**La Financière  
agricole**

**Québec** 

**If your operation participated in the AgriStability program in 2012**

Provide financial information only for the 2013 participation year.

**If your operation did not participate in the AgriStability program in 2012**

Forward any financial information to your accredited financial information preparer for the years from 2008 to 2013 that have not already been provided.

# GUIDE FOR REPORTING PRODUCTIVE UNITS FOR 2013

## The number of productive units:

- Is the measure of your operation's production capacity;
- Enables us to adjust your operation's reference year production margins in relation to its production capacity during the participation year;
- Allows us to factor the growth or decline of your operation and calculate program benefits.

The use of this guide will help you to correctly report your productive units in the appropriate **table** in the document **Additional Information**. Please complete the table **yourself** and then forward it to your accredited financial information preparer, along with the financial information that is needed to process your file for the 2013 participation year. Note that, in this text, when we refer to financial information, it includes productive units.

To make the financial data collection process easier, we have already entered into the Table of Productive Units, the units related to your coverage under crop insurance (ASREC) or Farm Income Stabilization Insurance (ASRA) for the 2013 participation year and for the 2008-2012 reference years. You must now enter the productive units that were not covered by those programs into the table for any years for which the information is needed.

If you have already participated in AgriStability we have entered, for reference purposes, the productive units reported for the last participation year for which you transmitted financial information. That information could be helpful to you for completing the Table of Productive Units for the 2013 participation year.

## Extraction of productive units from ASRA and ASREC

If you are a **former participant**, the productive units for the 2013 participation year were entered into the table based on a twelve-month fiscal period following the end of your fiscal period ending in 2012. If you are a **new participant**, they were entered based on your fiscal period ending in 2013 and any twelve-month periods prior to the start of that fiscal period back to 2008, where possible.

The productive units entered could be different from those listed on your crop insurance certificates or your stabilization insurance payment sheets, since they were established on the basis of the **twelve-month period** following the end (or prior to the start) of a known fiscal period, and not on the basis of an insurance year.

Considering that the documents for the financial information collection process are sent early, the productive units extracted for the production of feeder hogs, feeder cattle and slaughter cattle, milk-fed calves and grain-fed calves may be incomplete. At the time the data are extracted, we do not necessarily have all the slaughter data and live animal transaction data on hand. However, those productive units will be extracted again when processing financial information.

You must enter the opening and closing dates of every fiscal period for which you need to report financial information. When processing your financial information, if any of the fiscal periods entered in the table does not match your situation, we will adjust the number of productive units for each production to coincide with the actual period covered.

If, however, the opening and closing dates of your fiscal periods are accurate but the number of productive units for one or more of your productions is substantially different from the actual number at your operation, please contact your service centre of La Financière agricole so it can make any adjustments that are needed.

### Productive units not extracted from ASRA or ASREC

For any of your operation's productive units that do not appear in the table, you must, for the corresponding fiscal period:

- Enter the number for those whose code is already entered;
- Add, onto a new line, the productive unit code, the name of the production, the unit of measurement and the number of productive units for any other productions.

Please see the List of AgriStability Productive Units at the end of this brochure.

### Don't forget

- To report your productive units based on each of the periods covered by your fiscal periods;
- To report the number of productive units of non-marketed productions, in particular grain consumed on the farm (in hectares);
- To provide information for productive units for any participation year for which you have not already provided your financial information.

If there is not enough space in the table, add a sheet and enter the same type of information.

The following pages explain how to report your operation's productive units. The colour associated with the instructions corresponds to that assigned to each unit on the List of Productive Units found at the end of this brochure.

### Important note for new participants

When reading the following pages, please keep in mind these points:

- The text applies to operations reporting productive units for the 2013 year only. As a new AgriStability participant, you must also report productive units for each of your operation's fiscal periods ending in 2008 up until 2012 for which you carried out farming activities.
- If long-cycle productive units must be reported for several years, we suggest you start by determining those from the fiscal period ending in 2013. Then, it is often possible to stagger the number of productive units by a year to obtain those of the **previous** year.

## ANNUAL CROP PRODUCTIONS, NOT INCLUDING GREENHOUSE PRODUCTION (GREEN)

For each annual crop production associated with the colour **green**, report the number of productive units used to produce the crop harvested during the fiscal period ending in 2013.

**Productive units:** Hectares seeded or planted.

**Attention:** If several seedings resulted in several harvests of the same production, add up all the productive units.

**Example:** For 2 ha of lettuce seeded and harvested twice during the same fiscal period, report 4 ha as productive units.

**Attention:** If your fiscal period for the 2013 year ended between the time a product was seeded and the time it was harvested, enter the number of hectares seeded to produce the crop normally harvested during the 2013 fiscal period.

**Example:** If the fiscal period of a barley and grain corn producer ran from September 1, 2012 to August 31, 2013, the fiscal period ended between the time the corn was seeded and the time it was harvested in 2013. The productive units for the 2013 fiscal period will therefore include areas seeded with corn in 2012 and areas seeded with barley in 2013.

## PERENNIAL CROP PRODUCTIONS, NOT INCLUDING GREENHOUSE PRODUCTION (RED)

For each perennial crop production associated with the colour **red**, report the number of productive units in each category during the fiscal period ending in 2013.

**Productive units:** Hectares, trees or taps.

### Forage (hay, cereal forage, sorghum and millet except maize)

Report all areas of forage crops that were harvested at least once during any period covered by your fiscal period ending in 2013, even if the harvested forage was consumed by animals at your operation or sold on the biomass market. **Do not include** areas harvested as fodder after the harvest of a cover crop in the form of grain.

### Maple Production

Report the number of taps that yielded maple sap at your operation during the fiscal period ending

in 2013. **Do not include** the number of taps that produced maple sap that you purchased.

### Sod

The productive units for sod correspond to the hectares of sod harvested during the fiscal period ending in 2013.

### Long-Cycle Productions

#### Productivity Stage

Productive units for certain long-cycle or slow-growth productions, like berries, must be reported by using several codes, broken down according to their productivity stage. For certain productions, it is often possible to stagger the 2012 year's productive unit numbers to obtain the next category or productivity stage for the 2013 year.

**Be careful:** make certain to properly break down the productive units for plants whose productivity stage covers several years of life (ex.: standard apple trees from 21 to 30 years old), to account for any areas or trees that were added to the operation or removed from it.

### **Implantation**

When you plant new apple trees or new areas of a production that will not produce within the same fiscal period, report those productive units under the category **implantation**, up until there is a first harvest.

### **Christmas Trees**

Three productive units are used. The first is for the number of Christmas trees planted during the fiscal period ending in 2013 (code 32138). The second is for the total number of hectares in Christmas trees and of hectares in preparation for planting during the next fiscal period (code 33138). The last is for the number of Christmas trees sold during the fiscal period ending in 2013 (code 34138).

### **Apple Trees**

**If you were insured under crop insurance** for your apples or your apple trees for the period corresponding to your fiscal period ending in 2013, the information already entered into the table for the production represents the “tree” units covered and the number of tree plantings. “Tree” units are calculated on the basis of each of the categories of late-variety apple trees harvested at your operation.

**If you were not insured under crop insurance,** report the number of late-variety apple trees belonging to each of the apple tree categories on the List of Productive Units, including your operation’s late-variety apple tree plantings for the fiscal period ending in 2013.

## **FEEDING-TYPE PRODUCTIONS (YELLOW)**

For each animal production associated with the colour **yellow**, report, for each category, the number of productive units for the fiscal period ending in 2013.

**Productive units:** Animal heads sold (or kg of weight gain of cattle sold) and number of animal mortalities.

**Attention:** Report only animals actually sold and not changes in inventory since they will be taken into account based on the inventories reported in your 2013 financial information declaration.

### **Hog Production**

Among piglets purchased for partial feeding at the nursery, those who have been sold to another operation that will complete the feeding under code 21340 (Other animals) and those who died in the nursery under code 22340.

## CONTINUOUS PRODUCTIONS (BLUE)

For each of the productions associated with the colour **blue**, report the number of productive units produced by your operation during the fiscal period ending in 2013.

**Productive units:** Square metres of greenhouse space, kilograms of butter fat per day, females, hives, etc.

**Attention:** If the number of productive units changed during your fiscal period ending in 2013, report the average number of productive units.

**Example:** If your operation had 60 goats at the start of the fiscal period and 80 at the end, report 70 goats, or  $(60 + 80)/2$ , even if your fiscal period covered fewer than twelve months. However, if the change is substantial, you may calculate a weighted average to better reflect the actual situation (see the following examples involving greenhouse production).

### Quotas, Greenhouse or Mushroom Areas

Calculate a weighted average to take into account different quota purchase and sales dates and any expansion or reduction in the **areas under production** (greenhouse space or mushrooms) during the fiscal period ending in 2013.

**Example 1:** An operation produced greenhouse tomatoes for twelve months during its fiscal period ending on December 31, 2013. It used 5,000 m<sup>2</sup> of production space for the first five months of the year and 8,000 m<sup>2</sup> for the last seven months.

#### The calculation would be as follows

---

$$\begin{aligned} 5,000 \text{ m}^2 \times 5 \text{ months} &= 25,000 \\ 8,000 \text{ m}^2 \times 7 \text{ months} &= + \underline{56,000} \\ 81,000 \div 12 \text{ months} &= 6,750 \text{ m}^2 \\ &\text{of greenhouse space} \end{aligned}$$

---

In the above example, 6,750 m<sup>2</sup> of greenhouse space represents the average area the operation must report as productive units for greenhouse tomatoes during its fiscal period ending in 2013. The divisor is always the number of months in the fiscal period, even if the production period covers fewer than twelve months.

**Example 2:** An operation had two different productions on 12,000 m<sup>2</sup> of greenhouse space during its twelve-month fiscal period ending on December 31, 2013. It produced ornamental horticulture for four months on the entire 12,000 m<sup>2</sup>. It also produced tomatoes for four months on the entire 12,000 m<sup>2</sup> and tomatoes for two months on an area of 6,000 m<sup>2</sup>.

#### The calculations would be as follows

---

##### Sheltered ornamental horticulture:

$$\begin{aligned} 12,000 \text{ m}^2 \times 4 \text{ months} &= 48,000 \\ 0 \text{ m}^2 \times 8 \text{ months} &= + \underline{0} \\ 48,000 \div 12 \text{ months} &= 4,000 \text{ m}^2 \\ &\text{of greenhouse space} \end{aligned}$$

##### Greenhouse tomatoes:

$$\begin{aligned} 12,000 \text{ m}^2 \times 4 \text{ months} &= 48,000 \\ 6,000 \text{ m}^2 \times 2 \text{ months} &= 12,000 \\ 0 \text{ m}^2 \times 6 \text{ months} &= + \underline{0} \\ 60,000 \div 12 \text{ months} &= 5,000 \text{ m}^2 \\ &\text{of greenhouse space} \end{aligned}$$

---

In the above example, the operation must report 4,000 m<sup>2</sup> of greenhouse space for sheltered ornamental horticulture and 5,000 m<sup>2</sup> for greenhouse tomatoes during its fiscal period ending in 2013. The divisor is always the number of months in the fiscal period, even if the production period covers fewer than twelve months.

## Dairy Production

The right to produce, indicated in kilograms of butterfat per day on monthly milk payment statements, combines all the milk quota categories needed to determine the number of productive units for dairy production (cow's milk and cream). You must therefore:

- **Add** the rights to produce from every month of the fiscal period ending in 2013;
- **Divide** the result by the number of months in the fiscal period, even if the period covers fewer than twelve months.

The right to produce (quota for payment) includes:

- the quota held by the operation;
- the quota leased;
- the reporting of production losses;
- the loan quota for the program over;
- the production margins;
- integration.

## Chicken Production - Broilers and Roasters

For each of the eight-week periods for which at least a part of the period was included in the fiscal period ending in 2013, you must:

- **Add** the quotas held and the quotas rented;
- **Multiply** the result by the percentage of use in the period and by the number of weeks in the period that are included in your fiscal period ending in 2013;
- Then **add** the results from each of the periods and **divide** the total by the number of weeks in your fiscal period ending in 2013, even if you started or stopped your chicken production during that fiscal period or if the period covers fewer than twelve months.

Your calculation will be based on the data from each of the periods best corresponding to your fiscal period ending in 2013.

**Example of a broiler and roaster operation:** Fiscal period from January 1, 2013 to December 31, 2013

Period	Quota held (m <sup>2</sup> )	Quota rented (m <sup>2</sup> )	Total (m <sup>2</sup> )	Use (%)	Weeks	Calculation (m <sup>2</sup> )
A 115	1,000	0	1,000	104.32	8	8,345.60
A 116	1,000	100	1,100	113.90	8	10,023.20
A 117	1,000	100	1,100	114.94	8	10,114.72
A 118	1,100	0	1,100	113.18	8	9,959.84
A 119	1,100	50	1,150	110.86	8	10,199.12
A 120	1,100	(100)	1,000	114.68	8	9,174.40
A 121	1,100	0	1,100	106.39	4	4,681.16
<b>Total</b>					<b>52</b>	<b>62,498.04</b>

This operation's quota in m<sup>2</sup> for its chicken production for the 2013 year on the Canadian market is 1,201.89 m<sup>2</sup> (62,498.04 ÷ 52).

**Attention:** If you produced chickens for export (market expansion), you must first convert the kilograms of chicken produced during your fiscal period ending in 2013 into m<sup>2</sup> of quota on an annual basis and add the resulting number to the m<sup>2</sup> of quota for the Canadian market, as was determined above. Enter the total into the Table of Productive Units.

## Turkey Production

- **Establish** the amount of net quotas you rented during the periods in which you used a quota (from May to April of the following year) for which at least a part of the period was included in the fiscal period ending in 2013.
- **Multiply** the amount of net quotas you rented during each period by the ratio of the number of months in the period included in your fiscal period over the number of months in your 2013 fiscal period.

**Example:** Fiscal period from January 1, 2013 to December 31, 2013

	2012-2013	2013-2014
Quota rented from another <b>quota owner:</b>	1,600 m <sup>2</sup>	100 m <sup>2</sup>
Quota rented to another <b>turkey producer:</b>	- 400 m <sup>2</sup>	- 500 m <sup>2</sup>
	1,200 m <sup>2</sup>	- 400 m <sup>2</sup>

**For the period from May 2012 to April 2013**, the net rental was 1,200 m<sup>2</sup> (1,600 – 400), i.e. 400 m<sup>2</sup> (1,200 m<sup>2</sup> x 4 months/12 months) for the four-month period running from January 2013 to April 2013 of the fiscal period.

**For the period from May 2013 to April 2014**, the net rental was - 400 m<sup>2</sup> (100 - 500), i.e. - 267 m<sup>2</sup> (- 400 m<sup>2</sup> x 8 months/12 months) for the eight-month period running from May 2013 to December 2013 of the fiscal period.

In the above example, the amount of the net quota rented for the fiscal period ending on December 31, 2013, is therefore 133 m<sup>2</sup> (400 - 267). That number must be added to the average quota owned to obtain the operation's m<sup>2</sup> of quota for the 2013 year on the Canadian market.

**Attention:** If you produced turkeys for export, you must:

- **Convert** the kilograms of turkey produced during your fiscal period ending in 2013 into m<sup>2</sup> of quota on an annual basis;
- **Add** the resulting number to the m<sup>2</sup> of quota for the Canadian market, as was determined above;
- **Enter** the total into the Table of Productive Units.

## Production of Eggs for Consumption

- **Add** the number of chickens corresponding to the quota owned and rented for each of the 28-day production periods for which at least a part of the period was included in the fiscal period ending in 2013.
- **Divide** the result by the number of periods that are included, at least in part, in your 2013 fiscal period.

**Attention:** If you started or stopped your egg production during a fiscal period, or if the period covered fewer than twelve months, you must still divide the result by the number of periods overlapping the fiscal period, so as to obtain a weighted average.

## Production of Hatching Eggs

Productive units for hatching eggs are measured in thousands of eggs delivered during the fiscal period. You must therefore:

- **Establish** the number of eggs delivered during the fiscal period ending in 2013;
- **Divide** the resulting number by 1,000 (keep two numbers after the point).

# LIST OF AGRISTABILITY PRODUCTIVE UNITS IN 2013

## ANIMAL PRODUCTIONS

PRODUCTIONS	CODES	UNITS OF MEASUREMENT
<b>Dairy cattle</b>		
Cow's milk and cream, quota (the right to produce). Consult the guide.	21319	Kilograms of butterfat per day
Dairy breeding subjects. Do not include culled animals, those sold for meat or changes in inventory.	21724	Cows under 45 months old – sold
	22724	Cows under 45 months old – mortalities
	24724	Gestating heifers – sold
	25724	Gestating heifers – mortalities
	27724	Non-gestating heifers over 6 months old – sold
	28724	Non-gestating heifers over 6 months old – mortalities
	30724	Heifer calves 6 months old or under – sold
	31724	Heifer calves 6 months old or under – mortalities
<b>Beef cattle</b>		
Feeder cattle and slaughter cattle (semi, short and long finishing). Kilograms of weight gain of cattle sold, except if breeders. Do not include changes in inventory.	21720	Kilograms of weight gain
	22720	Feeder cattle and slaughter cattle – mortalities
Grain-fed calves sold at under 100 kg, live weight (at start-up stage.) Do not include changes in inventory. Consult the guide.	21704	Calves under 100 kg – sold live
	22704	Calves under 100 kg – mortalities at start-up stage
Grain-fed calves sold at 100 kg or over, live weight (at finishing stage). Do not include changes in inventory. Consult the guide.	24704	Calves at 100 kg or over – sold for slaughter
	25704	Calves – mortalities at finishing stage
Milk-fed calves sold at 107 kg or over, live weight. Do not include changes in inventory.	21705	Calves over 107 kg – sold
	22705	Calves – mortalities
Feeder calves (cow calves)	21722	Gestating heifers and cows
<b>Poultry</b>		
Turkeys, quota owned and rented. Consult the guide.	21334	Square metres
Chicken eggs (for consumption), quota owned and rented. Consult the guide.	21343	Quota in number of chickens
Chicken eggs (for hatching) delivered eggs. Consult the guide.	22344	Thousands of hatching eggs delivered
Chickens – broilers and roasters, quota owned, establishment-assisted and rented. Consult the guide.	21363	Square metres
Ostriches	21371	Females having laid eggs
Quails, pigeons, partridges, Northern Bobwhites. Do not include changes in inventory. Consult the guide.	21335	Animals sold
	22335	Animal mortalities
Ducks and geese. Do not include changes in inventory. Consult the guide.	21337	Animals sold
	22337	Animal mortalities
Emus and rheas	21376	Females having laid eggs
Pheasants and Guinea fowls. Do not include changes in inventory. Consult the guide.	21339	Animals sold
	22339	Animal mortalities
Turkey eggs	21342	Females having laid eggs
Pullets. Do not include changes in inventory. Consult the guide.	21360	Pullets sold
	22360	Pullet mortalities

## ANIMAL PRODUCTIONS (SUITE)

PRODUCTIONS	CODES	UNITS OF MEASUREMENT
<b>Swine</b>		
Piglets. Consult the guide.	21345	Sows having already birthed
Hogs for slaughter. Do not include changes in inventory. Consult the guide.	21346	Hogs over 65 kg sold, carcass weight
	22346	Hog mortalities
Females raised for reproduction (gilts). Do not include changes in inventory. Consult the guide.	21347	Females sold to over 100 kg of live weight
	22347	Female mortalities
<b>Other animals</b>		
Lambs	21740	Ewes having been bred and ewe lambs
Buffalo/bison	21350	Females having already birthed
Goats (slaughter and angora, including milk)	21354	Females having already birthed
Cervids	21364	Females having already birthed
Rabbits	21356	Females having already birthed
Wild boars	21358	Females having already birthed
Horses and other equine breeds (except racehorses), mare urine	21316	Females having already birthed
Honey, bee by-products and pollination	21142	Hives in production
Ranch fur animals	21238	Females having already birthed
Other animals. Do not include changes in inventory. Consult the guide.	21340	Animals sold
	22340	Animal mortalities

# CROP PRODUCTIONS

PRODUCTIONS	CODES	UNITS OF MEASUREMENT	
<b>Grains, oilseeds and special crops</b>			
Oats	21020	Hectares	
Woody biomass (short-rotation willow) at the establishment stage or not harvested during the fiscal period	21001	Hectares	
Woody biomass (short-rotation willow), area harvested having generated allowable income (cuttings, straw, bedding or biofuel) during the fiscal period	22001	Hectares	
Wheat	21021	Hectares	
Wheat, for milling	21058	Hectares	
Canola	21010	Hectares	
Soybeans, including canatto and nato	21057	Hectares	
Forage, including hay, cereal forage, sorghum and millet pellets and silage. Consult the guide	21264	Hectares	
Beans, dry edible	21004	Hectares	
Grain corn	21019	Hectares	
Silage corn or corn forage	21024	Hectares	
Switchgrass, Miscanthus and non-forage plants cultivated for the production of biomass or straw	Establishment stage (non-harvested)	21005	Hectares
	First and second crops	22005	Hectares
	Third crop or more	23005	Hectares
Barley	21018	Hectares	
Tobacco	21269	Hectares	
Other grains and oilseeds	21059	Hectares	
<b>Fruit</b>			
Apple trees - late variety - establishment stage	21060	Number of apple trees	
Apple trees - late-variety dwarf of 4 or 5 years old	22060	Number of apple trees	
Apple trees - late-variety dwarf of 6 years old	23060	Number of apple trees	
Apple trees - late-variety dwarf of 7 years old	24060	Number of apple trees	
Apple trees - late-variety dwarf of 8 years old or over	25060	Number of apple trees	
Apple trees - late-variety semi-dwarf of 4 or 5 years old	26060	Number of apple trees	
Apple trees - late-variety semi-dwarf of 6 years old	27060	Number of apple trees	
Apple trees - late-variety semi-dwarf of 7 years old	28060	Number of apple trees	
Apple trees - late-variety semi-dwarf of 8 years old or over	29060	Number of apple trees	
Apple trees - late-variety standard of 6 to 10 years old	30060	Number of apple trees	
Apple trees - late-variety standard of 11 to 15 years old	31060	Number of apple trees	
Apple trees - late-variety standard of 16 to 20 years old	32060	Number of apple trees	
Apple trees - late-variety standard of 21 to 30 years old	33060	Number of apple trees	
Apple trees - late-variety standard of 31 years old or over	34060	Number of apple trees	
Blueberries in corymbs - establishment stage	21064	Hectares	
Blueberries in corymbs - first crop	22064	Hectares	
Blueberries in corymbs - second crop	23064	Hectares	
Blueberries in corymbs - third crop	24064	Hectares	
Blueberries in corymbs - fourth crop	25064	Hectares	
Blueberries in corymbs of 6 years old - fifth crop	26064	Hectares	
Blueberries in corymbs - sixth crop or over	27064	Hectares	

## CROP PRODUCTIONS (SUITE)

PRODUCTIONS	CODES	UNITS OF MEASUREMENT
<b>Fruit (suite)</b>		
Blueberries semi-harvested dwarf - establishment or dormant stage	23067	Hectares
Blueberries - semi-harvested dwarf - first crop after establishment or dormant stage	24067	Hectares
Blueberries - semi-harvested dwarf - second crop after establishment or dormant stage	25067	Hectares
Cranberries - establishment stage	21068	Hectares
Cranberries - first crop	22068	Hectares
Cranberries - second crop	23068	Hectares
Cranberries - third crop	24068	Hectares
Cranberries - fourth crop	25068	Hectares
Cranberries - fifth crop or over	26068	Hectares
Strawberries - standard planted during the year	21073	Hectares
Strawberries - standard first crop	22073	Hectares
Strawberries - standard second crop or over	23073	Hectares
Strawberries - day-neutral: single crop, year of planting	24073	Hectares
Raspberries - establishment stage	21071	Hectares
Raspberries - first crop	22071	Hectares
Raspberries - second crop	23071	Hectares
Raspberries - third crop or over	24071	Hectares
Grapes/vines - establishment stage	21083	Hectares
Grapes/vines - first crop	22083	Hectares
Grapes/vines - second crop	23083	Hectares
Grapes/vines - third crop or over	24083	Hectares
Other berries	21063	Hectares
Other fruit trees (number of trees old enough to produce)	21098	Trees
<b>Potatoes</b>		
Potatoes, table	21147	Hectares
Potatoes, chips	21148	Hectares
Potatoes, seed	21150	Hectares
<b>Field fresh vegetables</b>		
Asperagus - establishment stage	21161	Hectares
Asperagus in production	22161	Hectares
Eggplants	21176	Hectares
Beets	21162	Hectares
Broccoli	21165	Hectares
Carrots	21169	Hectares
Celery	21171	Hectares
Cabbage	21151	Hectares
Brussel sprouts	21166	Hectares
Cauliflower	21170	Hectares
Pumpkins	21192	Hectares
Cucumbers	21175	Hectares
Squash	21202	Hectares
Spinach	21201	Hectares

# CROP PRODUCTIONS (SUITE)
