

Farm income stabilization insurance Program

Product Lambs

Production statement checklist

The table below gives the reasons why an offspring (identifier number) is ineligible for your insurable volume and a female is not considered as part of your breeding herd in your insurance file. Please note that you are always responsible for ensuring the conformity of the information in your file at Agri-Traçabilité Québec (ATQ) and at La Financière agricole du Québec (FADQ). If you notice any errors regarding your event declarations, please contact the ATQ. However, for information involving your insurable volume, contact your FADQ insurance representative. Any request for a correction must be justified and supported by documentary proof.

Reason and description	Contact FADQ
<p>Compliant transitory or local slaughterhouse</p> <p>The animal is slaughtered in a compliant transitory or local slaughterhouse (formerly Type B). The regulation requires that the animal be sold to the slaughterhouse. Heavy lambs sold must be confirmed by the Fédération des producteurs d'agneaux et moutons du Québec (FPAMQ) and the register of sales to local slaughterhouses must be signed by the producer.</p> <p>The list of slaughterhouses with a permit is available on the FADQ's website at www.fadq.qc.ca and a link is given for the MAPAQ's website.</p>	<p>Provide your service centre insurance representative with documentary proof of the animal's sale, i.e. sales receipt when the animal was sold to the slaughterhouse.</p>
<p>Error in a transaction when a contract is transferred</p> <p>When an insurance contract is transferred, all animals registered in the seller's ATQ file are transferred to the purchaser's file at ATQ. For an animal included in an insurance contract transfer, there is an error in the entry or exit information.</p>	
<p>Stakeholder not recognized – Type of stakeholder unknown at FADQ</p> <p>According to information held by FADQ, a stakeholder is unknown when information on the animal comes from a stakeholder that does not deal in animals. For example:</p> <ul style="list-style-type: none"> • ATQ • A stakeholder not listed at the FADQ <p>The type of stakeholder has never sent any information to the ATQ before.</p>	<p>Inform your service centre insurance representative so this can be verified.</p>
<p>Ownership not recognized</p> <p>The animal was sold but the FADQ cannot match the animal's ownership to the seller since the FADQ client number is missing, or the animal's site of origin, if reported by the buyer, does not belong to the seller client. The animal's exit declaration is missing.</p>	
<p>Animal made ineligible by the service centre</p> <p>An analysis of information on the animal showed that it is not eligible or cannot be considered as part of the breeding herd.</p>	<p>Provide your service centre insurance representative the sales receipt, the weighing proof, documents regarding the birth of the animal or any other document to prove corrections are required.</p>
<p>Exit inside Québec without sales information – Exit outside Québec without sales information</p> <p>An animal left the farm, but no purchase was declared to the ATQ. Whether or not the exit is in Québec or outside Québec, the transaction is considered as being without sales information and must be accepted by the FADQ, if necessary.</p>	

Reason and description (continued)	Contact FADQ
Exit of animal was not declared According to the program or traceability regulations, the animal's exit must be reported by the participant.	Provide your service centre insurance representative with the sales receipt, proof of weighing, documents regarding the animal's birth or any other document to prove corrections are required.
Exit followed by a death – Sale followed by a death FADQ received a date of death for the animal, but this death is missing from the exit or sales events processed by the FADQ to evaluate the seller's insurable volume. To be eligible for ASRA, the sale of animal must be justified.	
Slaughterhouse's conversion rate missing The slaughterhouse did not provide information about the weighing method used at the time of slaughter.	

Reason and description	Contact FPAMQ
Commercial lamb in inventory as breeder Offspring aged 108 days or under, sold as a commercial lamb, was registered as breeding stock in the inventory. The commercial lamb intended for finishing or sold for butchering cannot be sold as breeding stock. The sale of breeding stock must comply with the Farm Income Stabilization Program (ASRA) and be confirmed by the FPAMQ.	Provide information while respecting the terms and conditions in effect. You are always responsible for ensuring the compliance of information registered at the ATQ and the FPAMQ to sell stock sold for breeding or heavy lambs.
Time delay with Agency, invalid sale or exit A certain period of time was noted between the animal's sale by the producer and the confirmation issued by the FPAMQ's sales agency.	
Information from Agency, but no sale and exit information Although a transaction was confirmed by the FPAMQ, there is no sales or exit information. The animal was not reported as having left the farm by the seller and no purchase was reported.	
Seller of breeders not recognized The producer's participation in the GenOvis program and the registration of at least 10% of the female breeders with the Canadian Livestock Records Corporation need to be confirmed.	
Sale not confirmed by the Agency The sale of lambs was not confirmed by the FPAMQ.	

Reason and description	Contact ATQ
Entry date to be confirmed Purchases of female breeders were not reported at the time of purchase.	Report all animal movements, in particular entries and exits, and specify the event's actual date.
Identifier missing at least one data One or more data for the identifier is incomplete or missing. The missing data will be listed in the statement.	Provide information concerning the identifier, including all information relating to the birth of animals when you are the owner.

Reason and description (continued)	Contact ATQ
Identifier for more than one producer at a same site When an identifier is associated with a site belonging to several producers and the ownership is not clearly established, the identifier is associated with all owners associated with the site.	Provide your FADQ client number so it can be associated with the animal's identifier number when you are the animal's owner.
Identifier for more than one producer on different sites An identifier is associated with more than one producer and they are not at the same site.	
Identifier with incoherent data One or more data is incoherent with the animal's life chronology or the events registered for the identifier. For example, the date of sale is later than the date of death. This data is provided on the statement.	Provide additional information to regularize the identifier when information given for an event contains errors.
Replacement of a tag or unknown PI The permanent identification (PI) number replaces another PI without any match to the number of the original tag enabled has been replaced.	Provide the new tag number that replaces the original tag number. The tag number or the tag to be replaced must be retraced and reported.

For the following situations, you have nothing to do. However, for more information on terms and conditions, the program's administrative standards or stakeholders reporting information, please contact your FADQ insurance representative. You are responsible for meeting regulatory obligations.

Reason and description
Slaughterhouse closed – Slaughterhouse does not comply – Slaughterhouse not recognized by FADQ – Slaughter without slaughterhouse According to information held by the FADQ, the slaughterhouse is closed and had no slaughter permit at the time the animal was slaughtered. FADQ checks the compliance of federal, provincial or local slaughterhouses (or transitory) with the MAPAQ or Canadian Food Inspection Agency (CFIA). Animals slaughtered in a slaughterhouse not recognized by the FADQ for data transmission are not eligible: those slaughtered at a site that is not that of a slaughterhouse or the declarant is not a slaughterhouse. The list of slaughterhouses with permits is available on the FADQ's website at www.fadq.qc.ca , and links are given to the MAPAQ and CFIA websites.
Maximum age exceeded The age of the lamb sold for breeding exceeds the maximum age (male: max. 548 days and female: max. 365 days). With regard to the sale of the heavy lambs, please see the FPAMQ's sales agency regulations.
Animal already sold The lamb was not born on your farm in Québec. It was therefore already sold a first time and is not eligible.
Lamb whose entire carcass is condemned ATQ sent FADQ information indicating that the animal's carcass was condemned at the time of slaughter.
Dead animal The lamb is dead according to the information received: information from the rendering plant, laboratory (necropsy) or death certificate.
Breeder sold is under minimum age The FPAMQ confirms an exit (site transfer) of breeding stock under 109 days old.
Animal taken outside Québec The animal was taken outside Québec at one time or another during finishing without having been sold.

Reason and description (continued)

Mortality following the sale of breeding stock

Mortality following the sale of a male breeder without any proof (period of 60 days not met). To be eligible as breeding stock, the animal must be on the farm for at least 60 days and cannot be sold as a cull animal.

Birth outside Québec

Lambs must be born on a farm in Québec.

Birth does not comply

Only births declared by producer-breeders or certain authorized agents are eligible.

Weight below minimum

The weight of the lamb sold is below the required minimum (30 lb or 13.6 kg).

Sold offspring returned as a breeder

A lamb born on a farm in Québec was sold, but repurchased and returned to the inventory as a breeding female for the same client who saw it born. All breeding stock sold must be declared to the FPAMQ.

Transfer of the seller's contract

Since you have sold your insurance contract, insured animals were transferred to the purchaser of your herd insured by FADQ.

Sale after file is closed

A lamb was sold after the insurance file (ASRA) was closed.

Sale to a consumer

The animal was sold to a consumer and therefore is not insurable.
