

Farm income stabilization insurance Program Product Lambs Production statement checklist

The table below gives the reasons why an offspring (identifier number) is ineligible for your insurable volume and a female is not considered as part of your breeding herd in your insurance file. Please note that you are always responsible for ensuring the conformity of the declared events to Agri-Traçabilité Québec (ATQ) and to your file at La Financière agricole du Québec (FADQ). For information involving your insurable volume, contact your FADQ insurance representative. Any request for a correction must be justified and supported by documentary proof. The information must always reflect the traceability and actual situation of the farming operation.

Reason and description	Contact FADQ
<p>Compliant transitory or local slaughterhouse</p> <p>The animal is slaughtered in a compliant transitory or local slaughterhouse (formerly Type B). The regulation requires that the animal be sold to the slaughterhouse. Heavy lambs sold must be confirmed by the Fédération des producteurs d'agneaux et moutons du Québec (FPAMQ) and the register of sales to local slaughterhouses must be signed by the producer.</p> <p>The list of slaughterhouses with a permit is available on the FADQ's website at www.fadq.qc.ca and a link is given for the MAPAQ's website.</p>	<p>Provide your service centre insurance representative with documentary proof of the animal's sale: sales receipt, proof of sums received (proof of cashing, copie of cheque stamped by the financial institution) or any other documentary proof.</p>
<p>Sale to be recognized</p> <p>According to the information held by FADQ, the lamb was sold to a producer and requires a validation of compliance to program (ASRA) terms and conditions.</p>	
<p>Error in a transaction when a contract is transferred</p> <p>When an insurance contract is transferred, all animals registered in the seller's ATQ file are transferred to the purchaser's file at ATQ. For an animal included in an insurance contract transfer, there is an error in the entry or exit information.</p>	<p>Inform your service centre insurance representative so this can be verified.</p>
<p>Stakeholder not recognized – Type of stakeholder unknown at FADQ</p> <p>According to information held by FADQ, a stakeholder is unknown when information on the animal comes from a stakeholder that does not deal in animals. For example:</p> <ul style="list-style-type: none"> • ATQ • A stakeholder not listed at the FADQ <p>The type of stakeholder has never sent any information to the ATQ before.</p>	
<p>Ownership not recognized</p> <p>The animal was apparently sold, but the FADQ cannot match the animal's ownership to the seller-breeder, among other things, since the FADQ client number is missing, or the animal's site of origin, if reported by the buyer, does not belong to the seller client.</p>	<p>Provide your service centre insurance representative the sales receipt, the weighing proof, documents regarding the birth of the animal or any other document to prove corrections are required.</p>
<p>Animal made ineligible by the service centre</p> <p>An analysis of information on the animal showed that it is not eligible or cannot be considered as part of the breeding herd.</p>	
<p>Exit inside Québec without sales information – Exit outside Québec without sales information</p> <p>An animal left the farm, but no purchase was declared to the ATQ. Whether or not the exit is in Québec or outside Québec, the transaction is considered as being without sales information and must be accepted by the FADQ, if necessary.</p>	

Reason and description (continued)	Contact FADQ
<p>Exit to be declared</p> <p>According to the program or traceability regulations, the animal's exit must be reported by the participant.</p>	<p>Provide your service centre insurance representative with the sales receipt, proof of weighing, documents regarding the animal's birth or any other document to prove corrections are required.</p>
<p>Exit not recognized</p> <p>An exit was declared by a stakeholder other than the producer-breeder without the animal ever having entered the stakeholder's site.</p>	
<p>Exit followed by a death – Sale followed by a death</p> <p>FADQ received a date of death for the animal, but this death is missing from the exit or sales events processed by the FADQ to evaluate the seller's insurable volume. To be eligible for ASRA, the sale of animal must be justified.</p>	
<p>Slaughterhouse's conversion rate missing</p> <p>The slaughterhouse did not provide information about the weighing method used at the time of slaughter.</p>	

Reason and description	Contact FPAMQ
<p>Information from Agency, but no sale and exit information</p> <p>Although a transaction was confirmed by the FPAMQ, there is no sales or exit information. The animal was not reported as having left the farm by the seller and no purchase was reported.</p>	<p>Provide information while respecting the terms and conditions in effect.</p> <p>You are always responsible for ensuring the compliance of information registered at the ATQ and the FPAMQ to sell stock sold for breeding or heavy lambs. Among other things, for sales at the farm, you must send the actual slaughter date to the FPAMQ.</p>
<p>Seller of breeders not recognized</p> <p>The producer's participation in the GenOvis program and the registration of at least 10% of the female breeders with the Canadian Livestock Records Corporation need to be confirmed.</p>	
<p>Sale not confirmed by the Agency</p> <p>The sale of lambs was not confirmed by the FPAMQ or the confirmation received is different from the exit or sale.</p>	

Reason and description	Contact ATQ
<p>Identifier missing at least one piece of information</p> <p>At least one piece of information for the identifier is incomplete or missing. The missing information will be listed in the statement.</p>	<p>Provide information concerning the identifier, including all information relating to the birth of animals when you are the owner.</p>
<p>Replacement of a tag or unknown PI</p> <p>The permanent identification (PI) number replaces another PI without any match to the number of the original tag enabled has been replaced.</p>	<p>Provide the new tag number that replaces the original tag number. The tag number or the tag to be replaced must be retraced and reported.</p>

For the following situations, you have nothing to do. However, for more information on terms and conditions, the program's administrative standards or stakeholders reporting information, please contact your FADQ insurance representative. You are responsible for meeting regulatory obligations.

Reason and description

Slaughterhouse closed – Slaughterhouse does not comply – Slaughterhouse not recognized by FADQ – Slaughter without slaughterhouse

According to information held by the FADQ, the slaughterhouse is closed and had no slaughter permit at the time the animal was slaughtered. FADQ checks the compliance of federal, provincial or local slaughterhouses (or transitory) with the MAPAQ or Canadian Food Inspection Agency (CFIA). Animals slaughtered in a slaughterhouse not recognized by the FADQ for data transmission are not eligible: those slaughtered at a site that is not that of a slaughterhouse or the declarant is not a slaughterhouse.

The list of slaughterhouses with permits is available on the FADQ's website at www.fadq.gc.ca, and links are given to the MAPAQ and CFIA websites.

Breeder sold is under minimum age

The FPAMQ confirms an exit (site transfer) of breeding stock under 109 days old.

Maximum age exceeded

The age of the lamb sold for breeding exceeds the maximum age (male: max. 548 days and female: max. 365 days). With regard to the sale of the heavy lambs, please see the FPAMQ's sales agency regulations.

Animal already sold

The lamb was not born on your farm in Québec. It was therefore already sold a first time and is not eligible.

Lamb whose entire carcass is condemned

ATQ sent FADQ information indicating that the animal's carcass was condemned at the time of slaughter.

Dead animal

The lamb is dead according to the information received: information from the rendering plant, laboratory (necropsy) or death certificate.

Animal taken outside Québec

The animal was taken outside Québec at one time or another during finishing without having been sold.

Mortality following the sale of breeding stock

Mortality following the sale of a male breeder without any proof (period of 60 days not met). To be eligible as breeding stock, the animal must be on the farm for at least 60 days and cannot be sold as a cull animal.

Birth outside Québec

Lambs must be born on a farm in Québec.

Birth does not comply

Only births declared by producer-breeders or certain authorized agents are eligible.

Weight below minimum

The weight of the lamb sold is below the required minimum (30 lb or 13.6 kg).

Sold offspring returned as a breeder

A lamb born on a farm in Québec was sold, but repurchased and returned to the inventory as a breeding female for the same client who saw it born. All breeding stock sold must be declared to the FPAMQ.

Reason and description (continued)

Transfer of the seller's contract

Since you have sold your insurance contract, insured animals were transferred to the purchaser of your herd insured by FADQ.

Sale after file is closed

A lamb was sold after the insurance file (ASRA) was closed.

Sale before file is opened

A lamb was sold before the insurance file (ASRA) was opened.

Sale to a consumer

The animal was sold to a consumer and therefore is not insurable.
